Indications for Use:
Recommended for balloon atrioseptostomy, an accepted technique in most pediatric cardiology centers for the palliation of several congenital cardiac defects. Balloon atrioseptostomy is performed in conjunction with diagnostic cardiac catheterization and has been carried out after the diagnosis of several congenital cardiac defects: transposition of the great arteries, total anomalous pulmonary venous drainage without pulmonary obstruction, tricuspid atresia, mitral stenosis, mitral atresia, and pulmonary atresia with intact ventricular septum. The 611200 - 9.5mm is primarily for infants less than 2 kg.

Refer to the Z-5™ Instructions for Use for relevant warnings, precautions, complications, and contraindications.

Inner Catheter Lumen
For utilization of a guidewire

Exceptionally Low Profile
Allows for a smaller introducer size than the competition

35 Degree Tip Angulation
Facilitates passage into the left atrium

Radiopaque Catheter Body and Image Band
For clear visualization and positioning under fluoroscopy

Non-compliant, Latex-free Balloon
Maintains its shape during pullback

Rx only
